PROFILE

Full stack developer with a BSc in Computer Science and commercial experience across .NET, PHP and JavaScript. Comfortable owning a feature end to end, from a Figma design through to a deployed, accessible interface. Particularly interested in UI/UX and game design. Seeking a junior software engineering role.

SKILLS

Languages JavaScript, TypeScript, C#, Python, Java, C, Rust, PHP, HTML/CSS

Frameworks & libraries .NET, .NET MAUI, Node.js, Express, p5.js, Processing

Tools Git, GitHub Pages, Figma, Visual Studio, VS Code, REST APIs, SQLite

Practices Responsive web design, UI/UX, WCAG AA accessibility, testing and debugging, Agile (self-managed)

EXPERIENCE

Freelance Web Developer · Manchester, UK (Remote)

Jun 2025 – Present

- Deliver responsive client websites in HTML, CSS and JavaScript — four completed to date, the first turned around in under two weeks
- Own the full project lifecycle for each engagement: requirements, design, build and deployment
- Maintained 100% on-time delivery across four concurrent client projects

Full Stack Developer (Front-End Focus) · Global PPC Ltd, Remote

Feb 2025 – Oct 2025

- Built responsive, high-performance web interfaces in p5.js, .NET and PHP, cutting page load times by roughly 40% across three client projects
- Designed and integrated REST APIs enabling real-time data sync between front-end and back-end systems
- Translated design concepts into production-ready UIs, working closely with designers and back-end developers
- Improved front-end performance and code quality, contributing to testing, deployment and on-time delivery of every assigned feature
- Recognised within the team for technical proficiency, fast learning and proactive problem-solving

PROJECTS

Wizard Battles · p5.js, Node.js, Express

- Dissertation project: a turn-based browser game that measures risk-taking behaviour for use in psychology research, built and run under university ethics approval
- Wrote an adaptive opponent AI that counters the player's patterns from move history without reading the current turn, preserving experimental validity
- Logged every round server-side to CSV, then ran a pilot with 10 participants and cross-referenced the gameplay logs against their questionnaire responses
- Built the interface to WCAG AA contrast with no time limits, keeping it playable across age groups and for non-gamers

Pantry Wizard · .NET MAUI, C#, SQLite

- Cross-platform mobile app for managing household inventory, backed by a local SQLite database and built around a one-handed mobile UI

CLI Battleships · Python, C, Rust

- Built the same terminal game three times over to compare programming paradigms, memory models and error handling across the three languages

Portfolio site · HTML, CSS, JavaScript, Figma

- Designed the interface in Figma, then implemented it by hand with no framework or build step; responsive down to mobile and deployed on GitHub Pages

Top-down game engine · p5.js — in progress

- Building a custom 2D engine from scratch rather than using an existing framework, to work through rendering, collision and game-loop design directly

EDUCATION

BSc (Hons) Computer Science — 2:1 · Manchester Metropolitan University

2022 – 2025
